

ABSTRACT OF THE DISCLOSURE

The present invention ~~involves a reversible jacket that converts into a tote bag.~~
~~The back portion of the jacket consist of an oversized pocket which when turned inside out, the entire jacket is received into the pocket thus converting garment into a tote bag.~~
~~If desired, the jacket can be worn in the reversible mode at which the pocket on the said back portion is then~~ relates to a combination convertible article useful as a jacket and tote bag in one in which the jacket is reversible. It is designed to be a convenient and practical jacket suitable for light travel and active wear. The jacket can quickly be turned into a tote bag by executing maneuvers that are basic and simple. The jacket has as a part of its structure a double layer of material that is sewn together, which is the sack portion with one of the surfaces having an opening leading to a sack portion. The sack portion can be inverted to secure the jacket into the sack, thus forming the tote bag structure. In addition to the tote bag structure, the jacket is comprised of a reversible feature that exist due to the result of the double layer of material sewn together and it is worn in the reverse mode in which the reverse mode prohibits any indication of the jacket's multiple functions and enables the back piece, which is the sack and the sack portion opening of the jacket to be protected without the use of any closing devices and or fixtures and allowing the appearance of the (said) sack portion to be completely concealed.
